# Generación de información climática multi-escala para aumentar la resiliencia del sector energético Español.

## Proyecto BOREAS

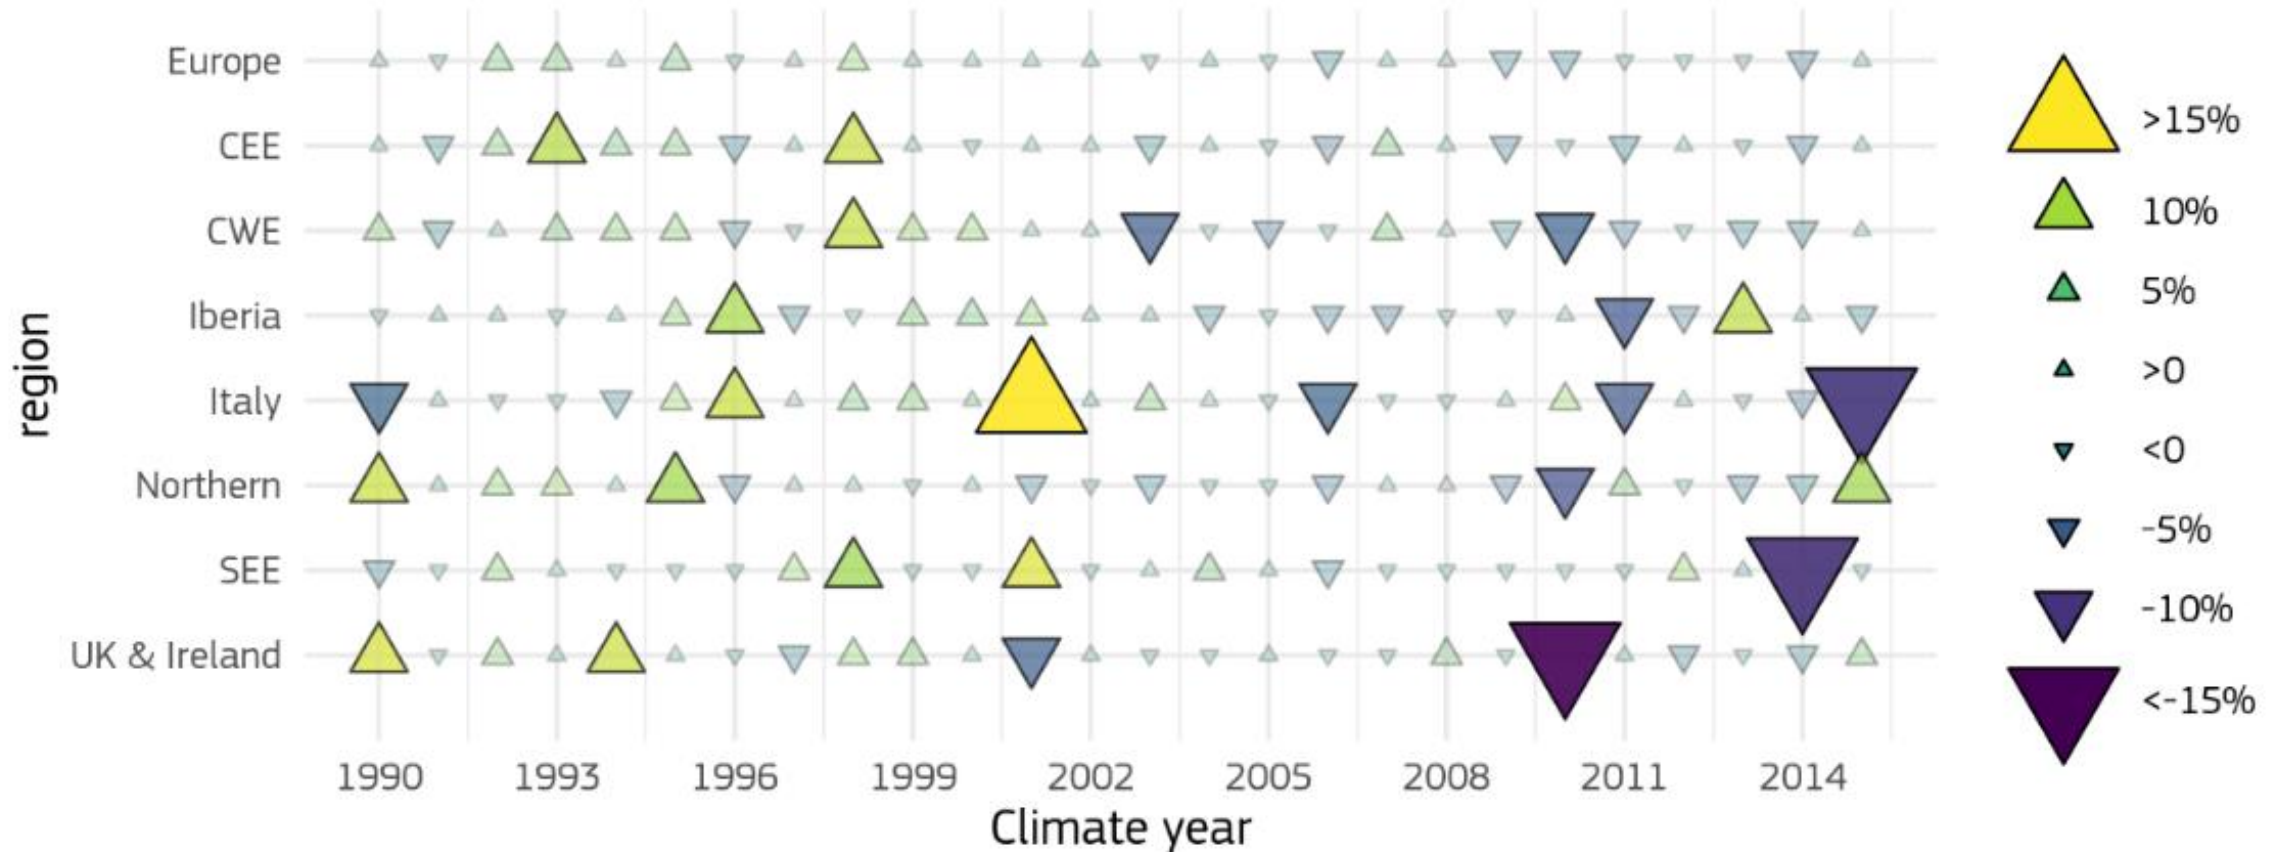

A. Soret, V. Torralba, V. Agudetse-Roures, A. Batalla, E. Baulenas, D. Bojovic, C. Delgado-Torres, S. Moreno-Montes, Á. G. Muñoz, M. Olmo, N. Pérez-Zanón, P. Trascasa-Castro, Sheetal Saklani

Esta publicación/resultados es parte del proyecto PID2022-140673OA-I00 financiado por MICIU/AEI/10.13039/501100011033 y por FEDER, UE

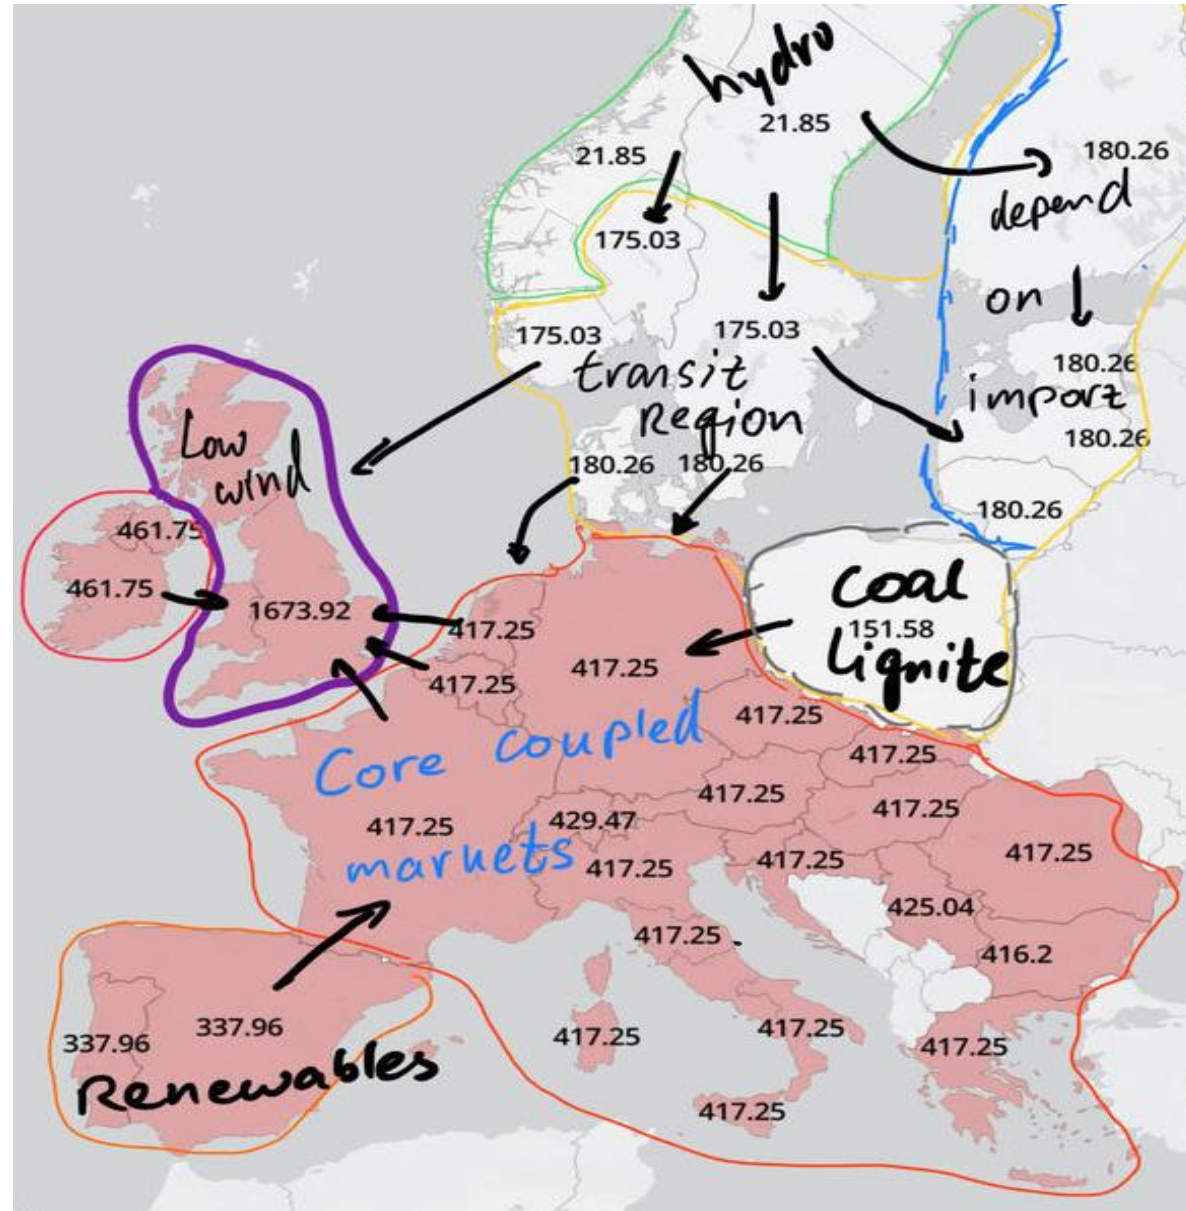

# Introduction. Motivation

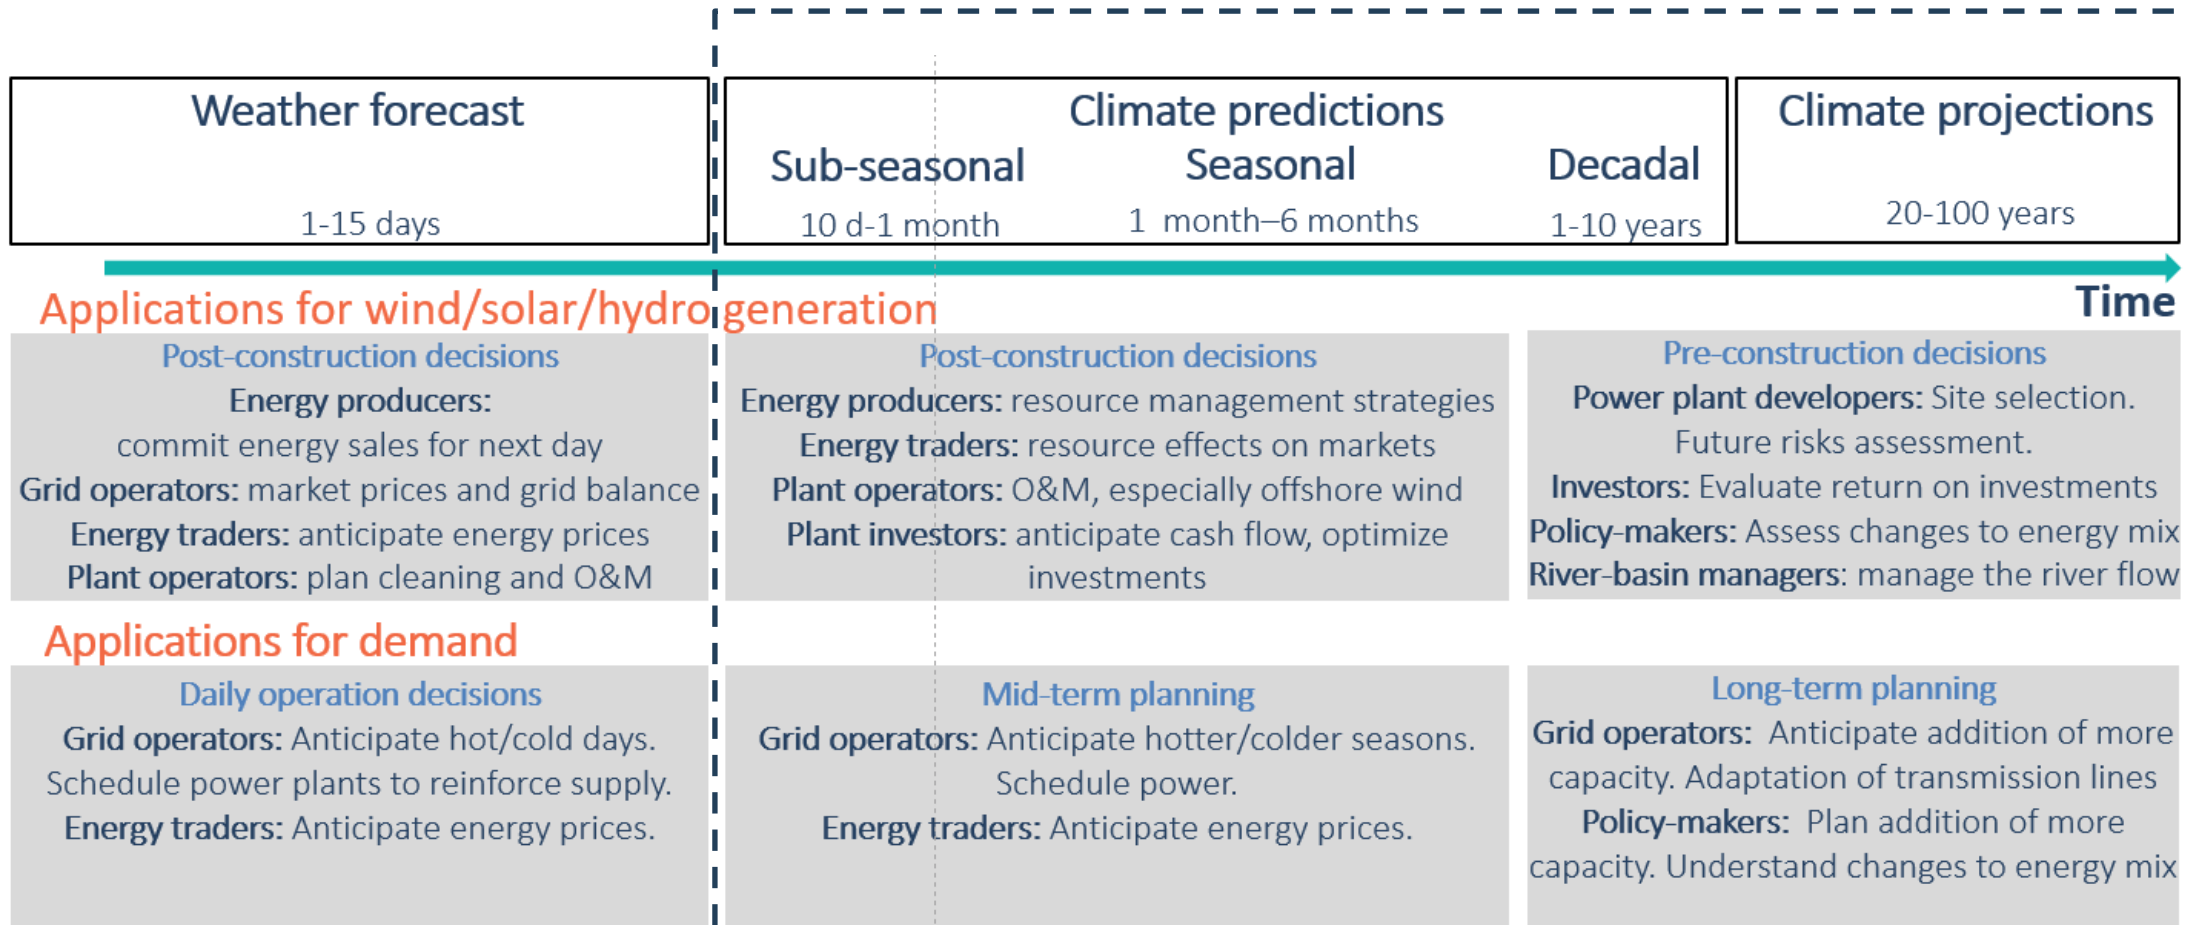

Annual variability (percentage deviation from the average) of onshore wind resources in the 26 climate years for the considered regions. Source: JRC, 2020

# Introduction. Motivation

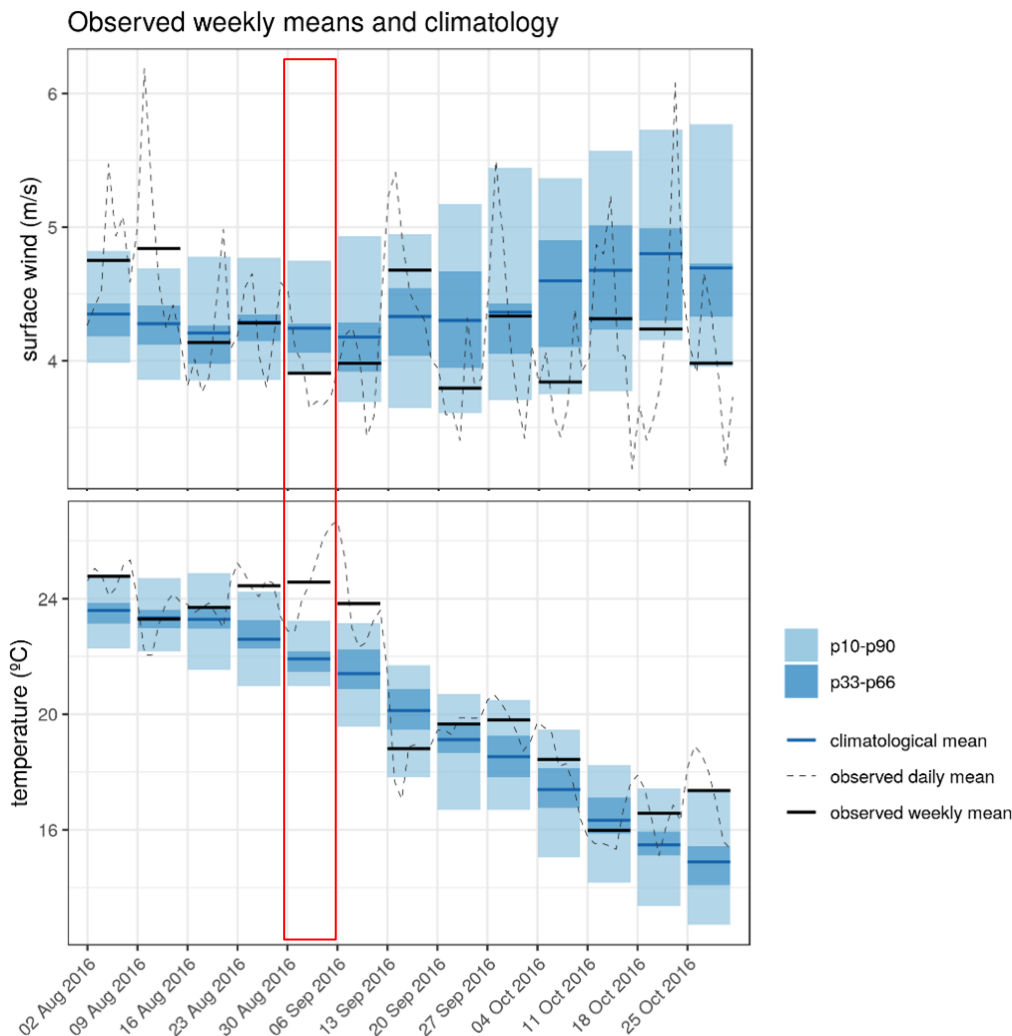

The day ahead prices for 16/12/2021. Large differences across the continent, with a core region of around €420. UK prices are the highest in Europe due to low wind energy production, while Iberian system prices are the lowest due to high wind resources (source: EnAppSys).

# Applications

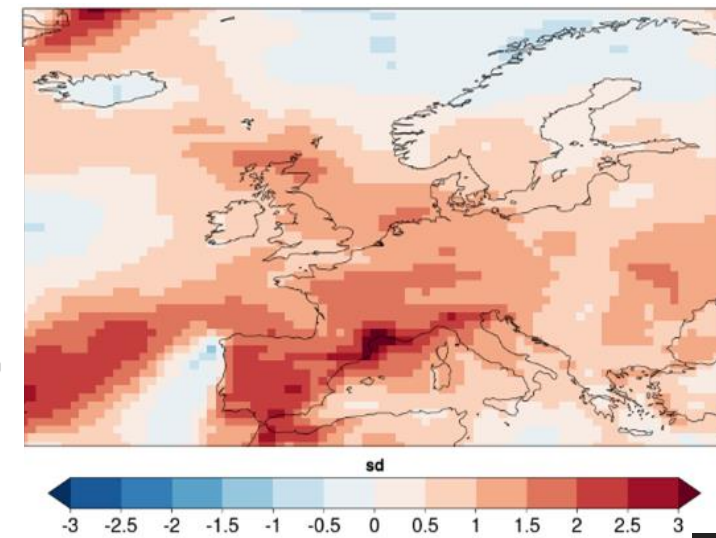

# Heat wave and wind drought in Spain. Sep 2016

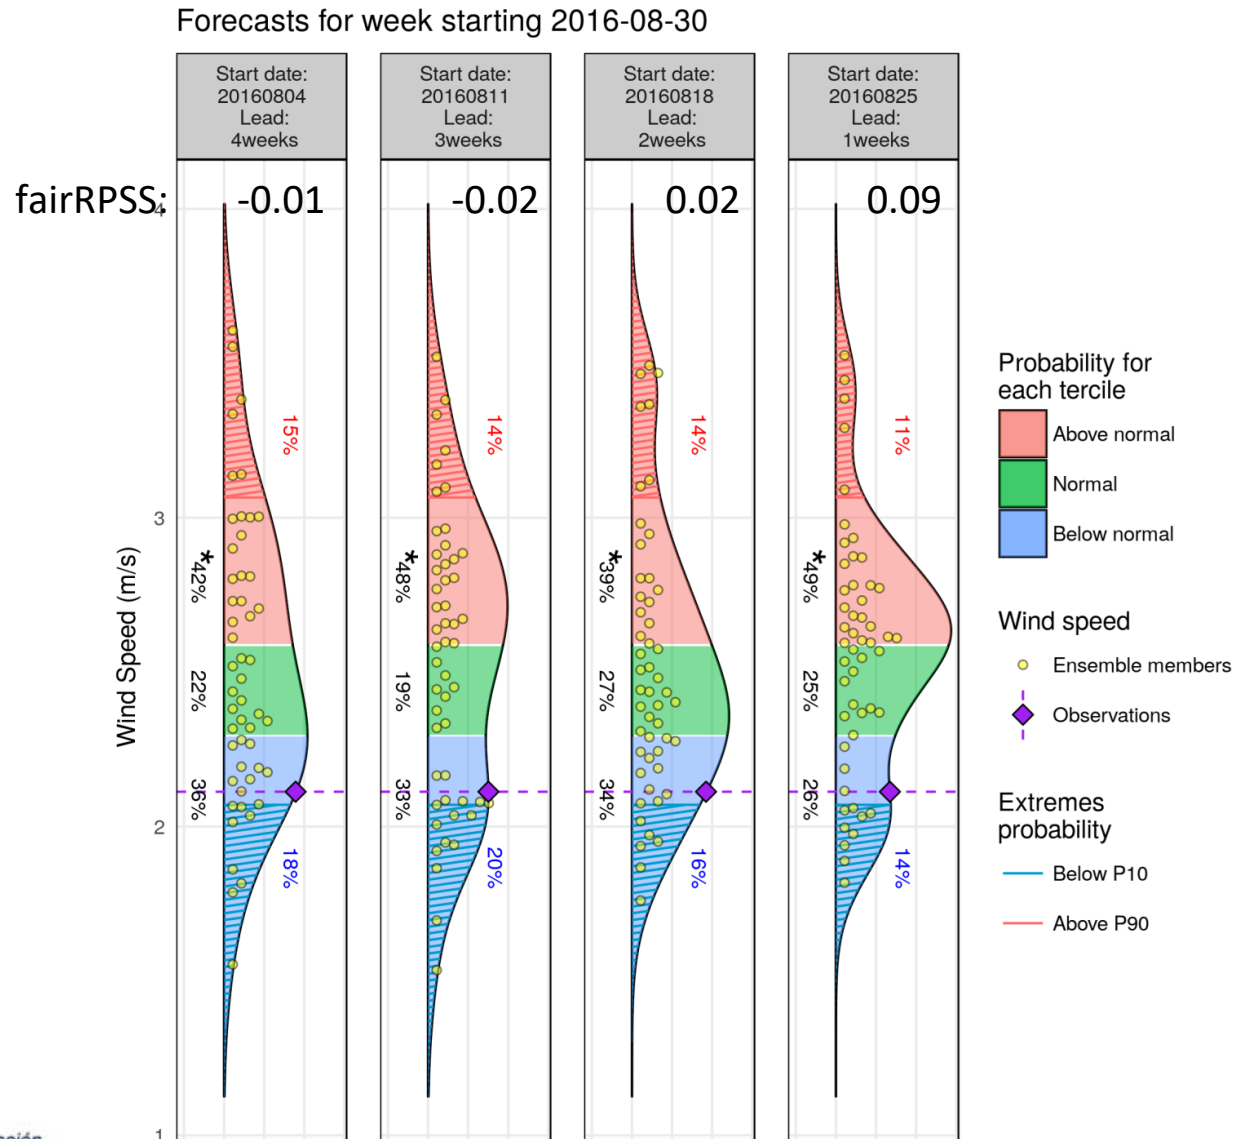

A heat wave and wind drought over Iberian Peninsula created a combination of:

- ▶ large increase in electricity demand
- ▶ lower than usual wind power generation

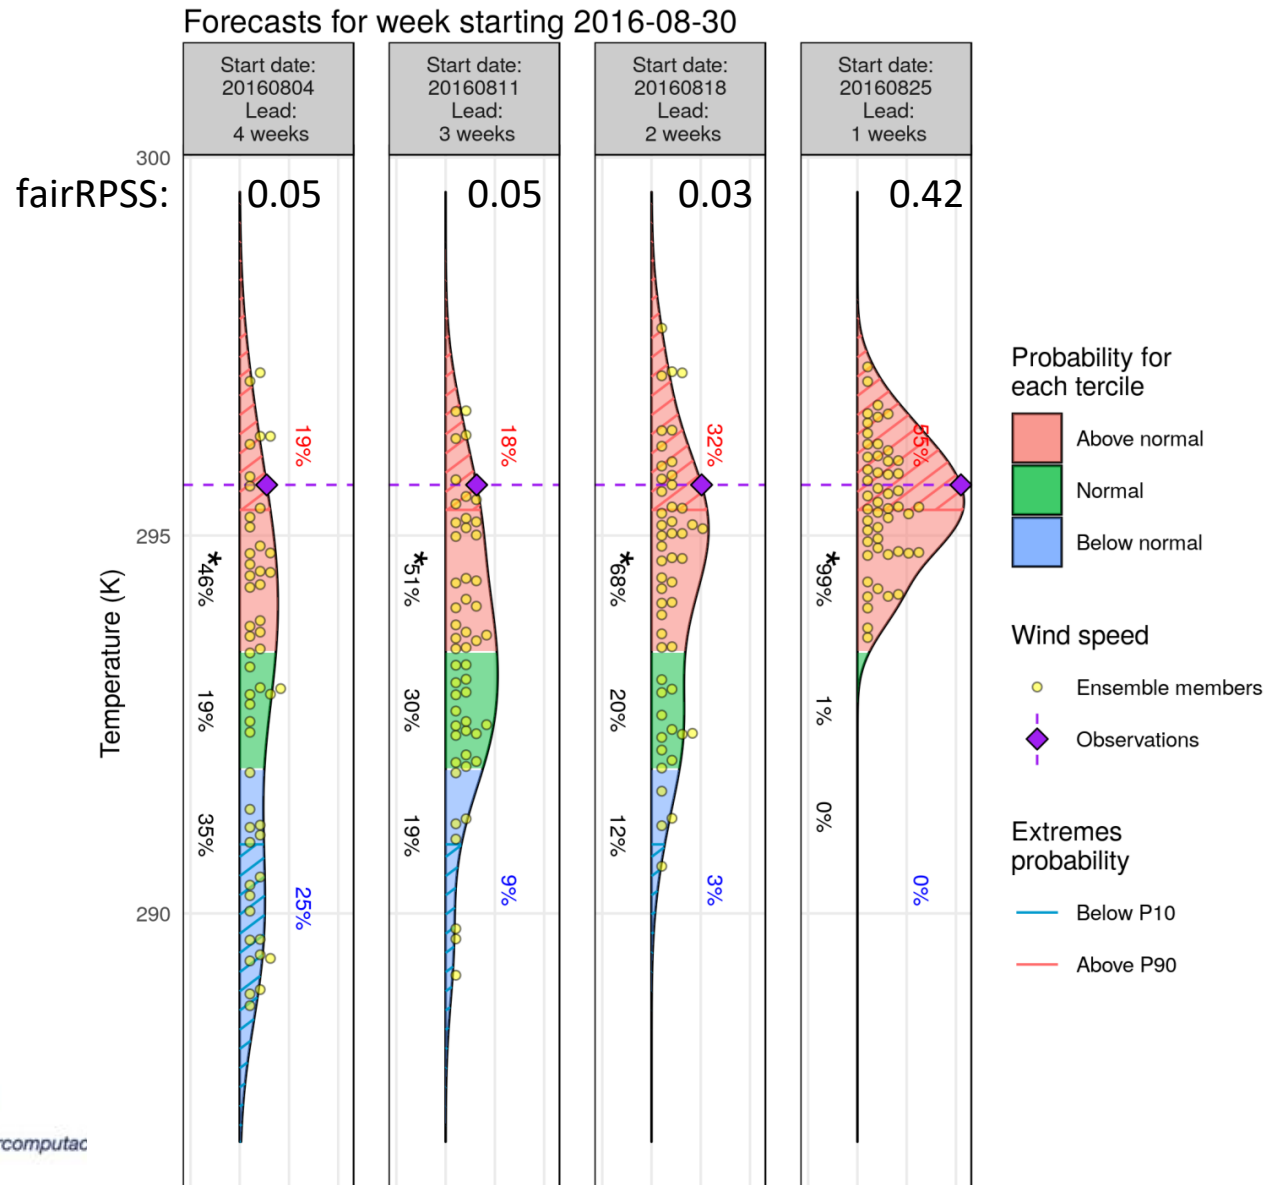

Surface wind and temperature anomalies for the week 30/08/2016-5/09/2016. ERA-Interim with respect to climatology (1981-2017)

# Heat wave and wind drought in Spain. Sep 2016

System: ECMWF monthly prediction system  
Reanalysis: ERA-Interim  
Bias adjusted –calibrated  
Hindcast: 1996-2015  
Lat= 40.5 N/Lon = 358.5 E

# Heat wave and wind drought in Spain. Sep 2016

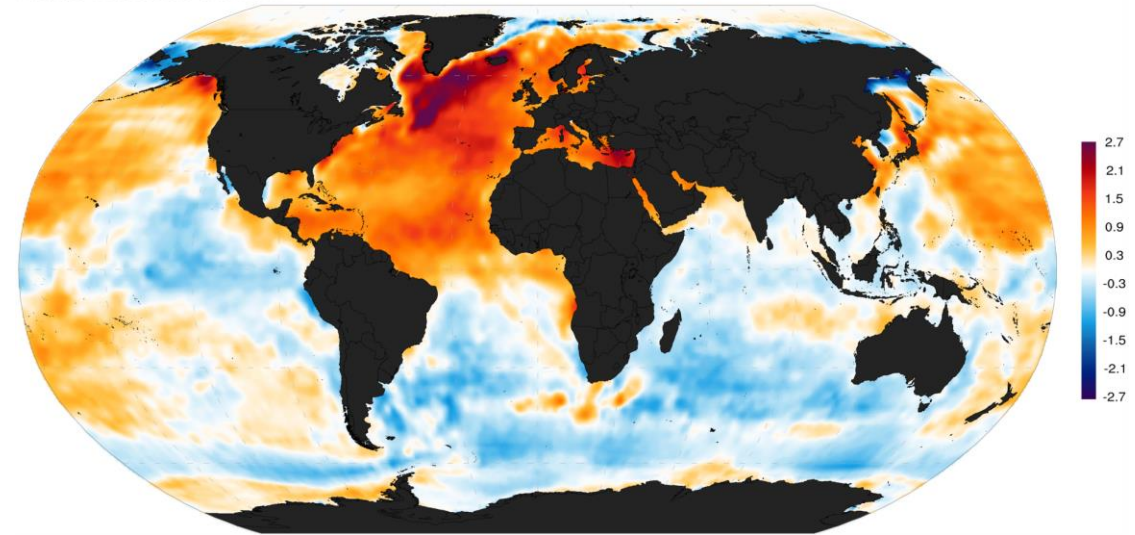

System: ECMWF monthly prediction system  
Reanalysis: ERA-Interim  
Bias adjusted –calibrated  
Hindcast: 1996-2015  
Lat= 40.5 N/Lon = 358.5 E

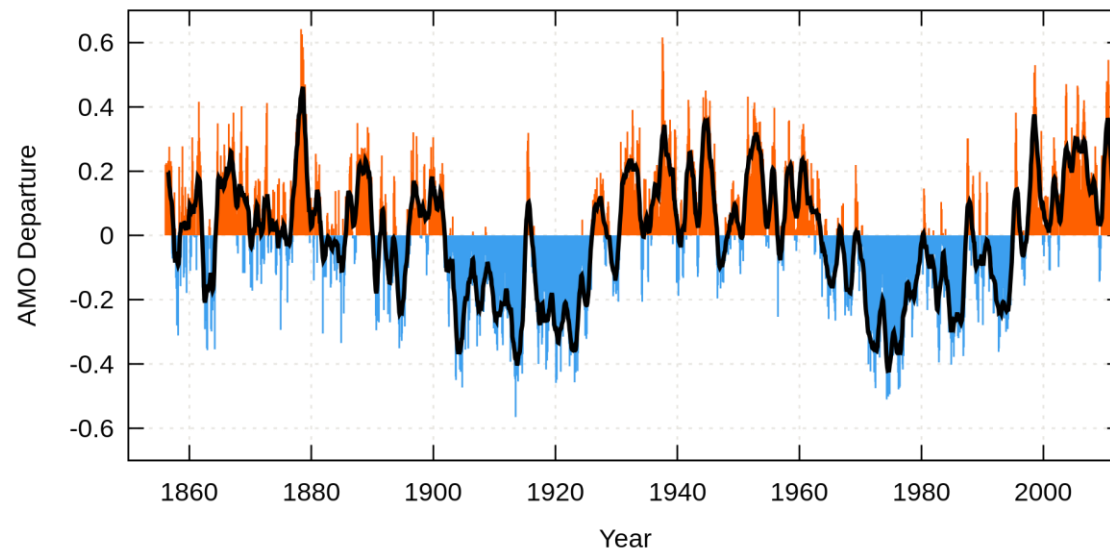

# Novel research lines: Decadal predictions

- Between seasonal predictions and climate projections
- Both initial value and boundary condition problems
- Different sources of predictability

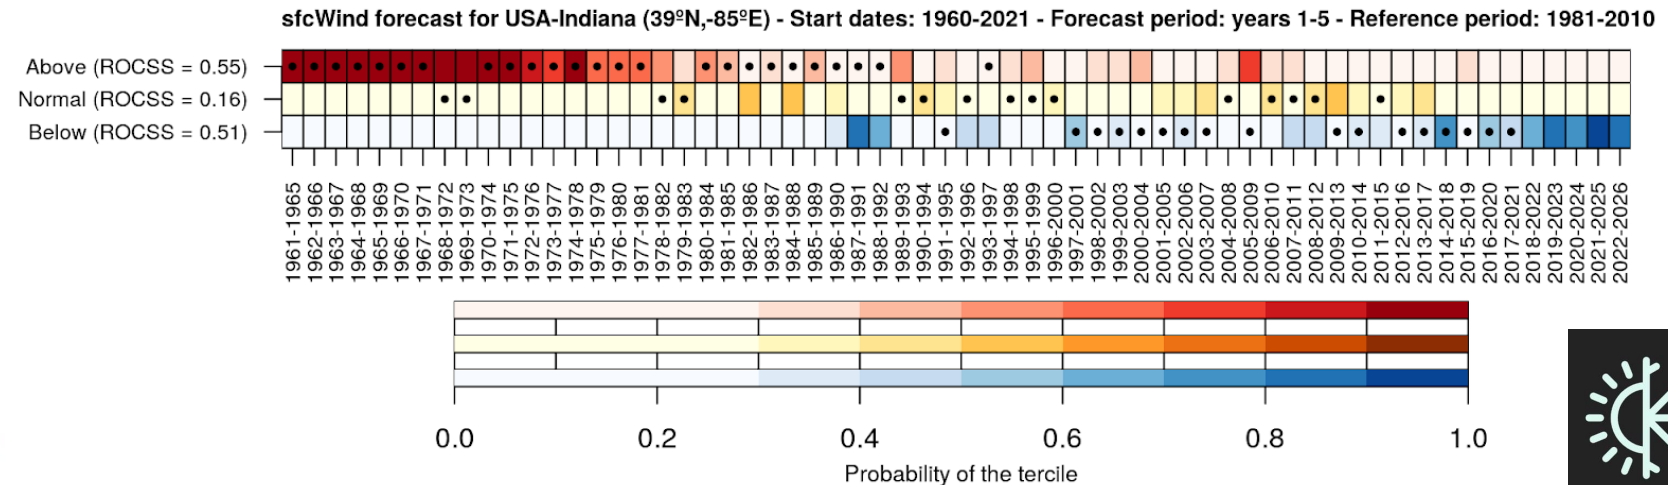

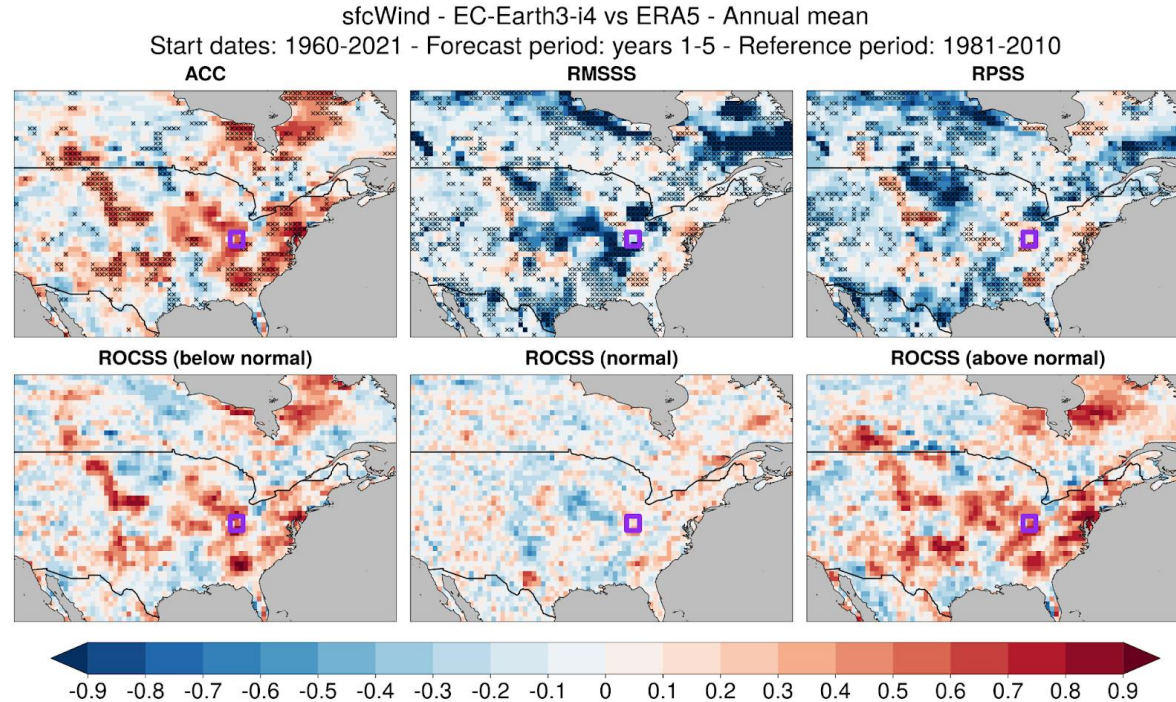

Atlantic Multidecadal Oscillation

Monthly values for the AMO index, 1856 -2013

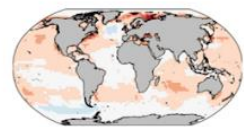

# Novel research lines: Decadal predictions

# Novel research lines: Seamless seasonal to decadal predictions

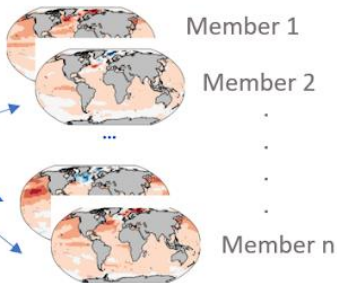

Seasonal prediction -  
Ensemble mean SST

Init: May (each year)  
Forecast: May-October

Decadal prediction - SST

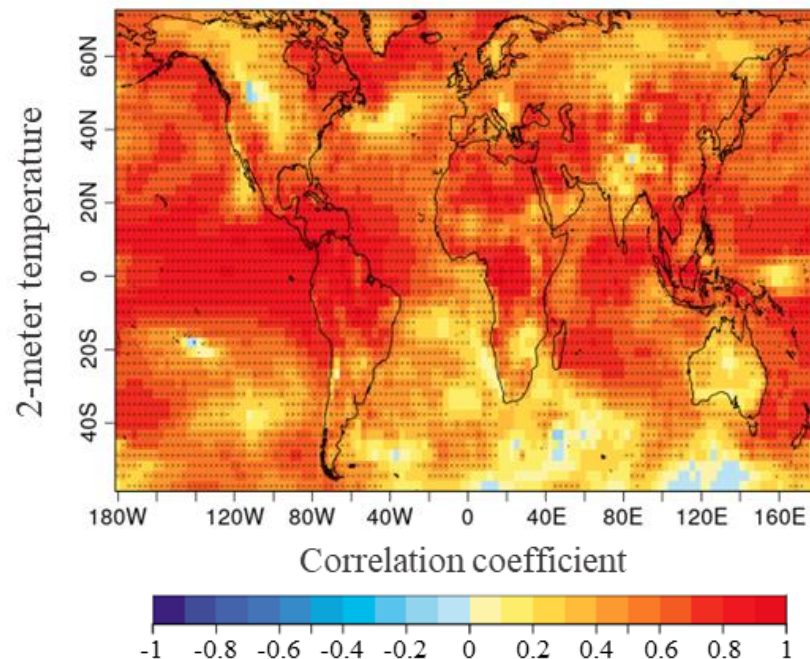

Global SST Pattern Correlation

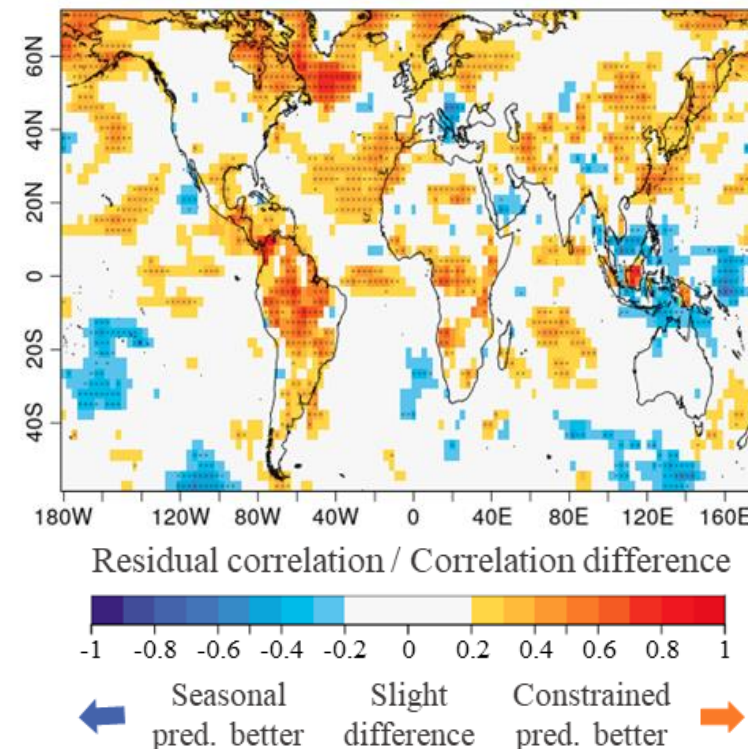

Init: around Jan (each year)  
Forecast: May-October of Year 1

Select **Top30** decadal prediction members with **highest** global SST pattern correlation for the year 1981

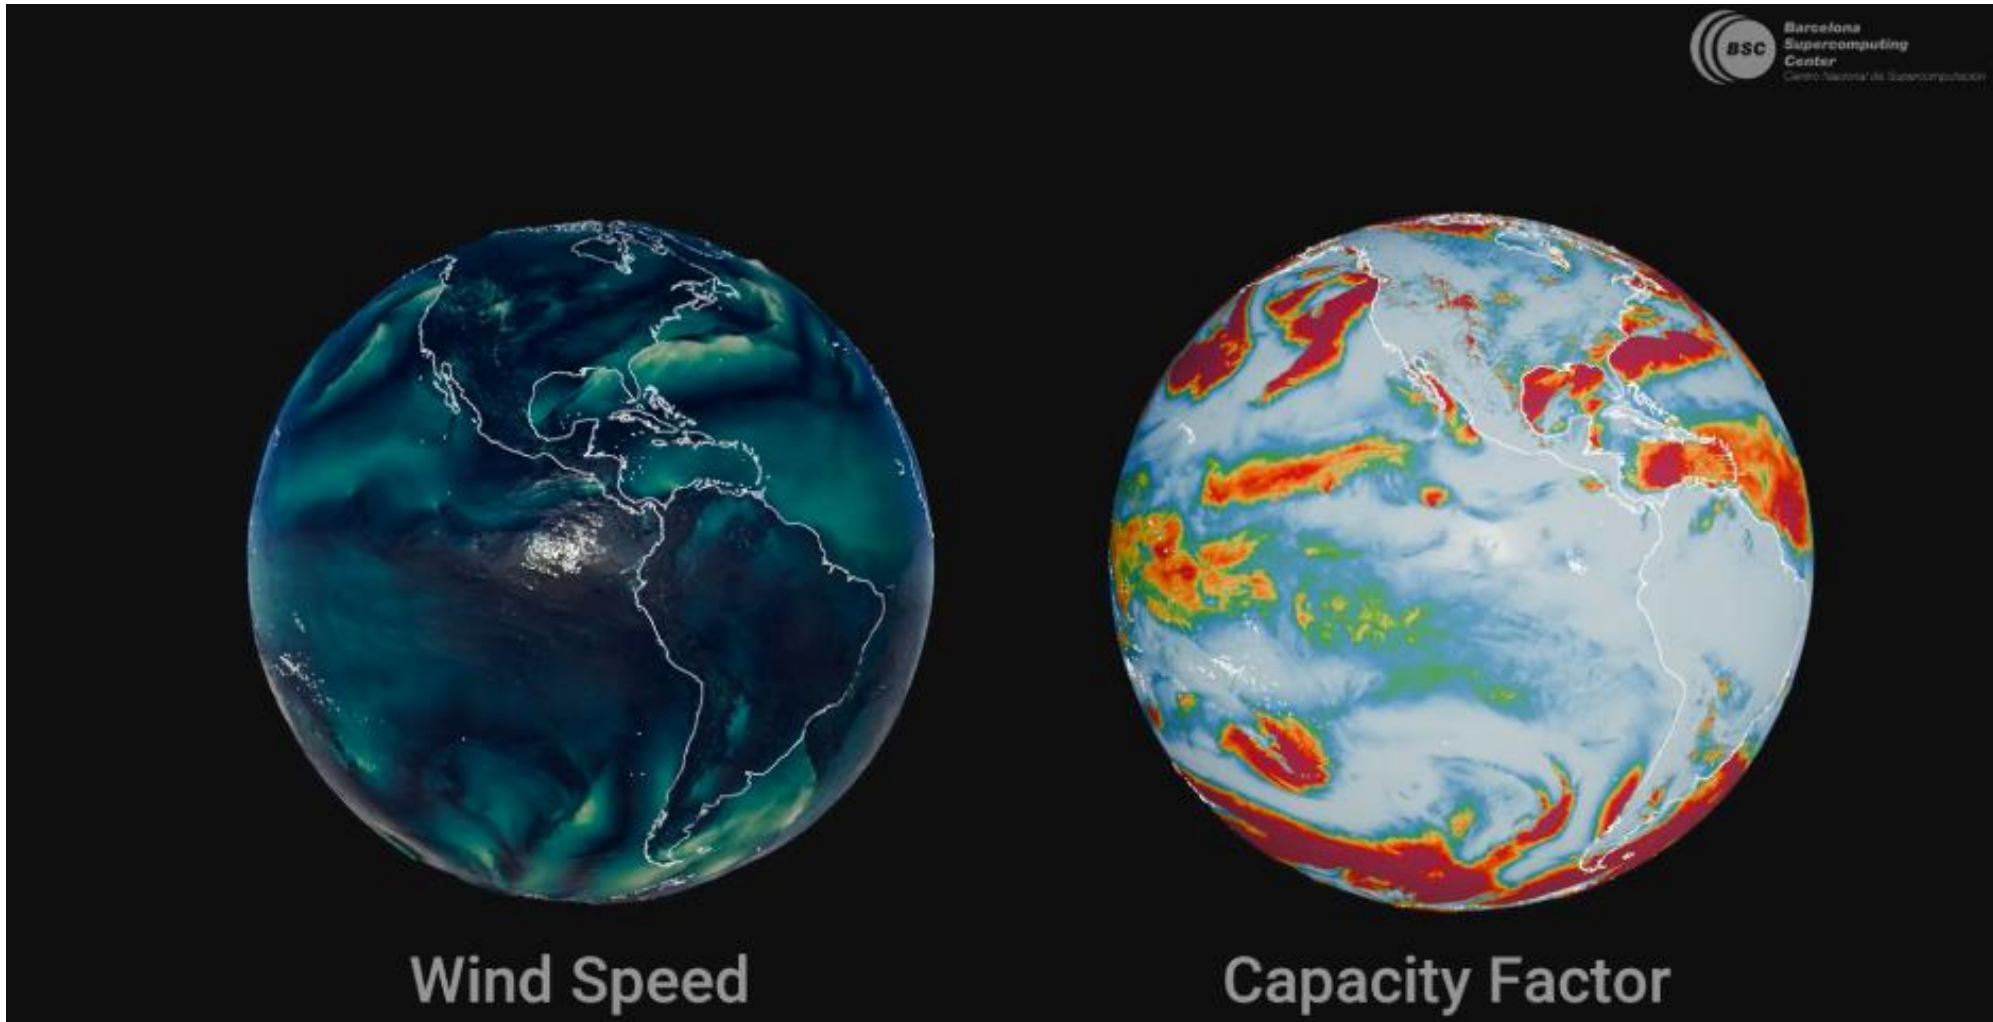

Constrained decadal prediction skill  
(FY1 May-Oct)

Difference in skill between constrained decadal  
and seasonal prediction (FY1 May-Oct)

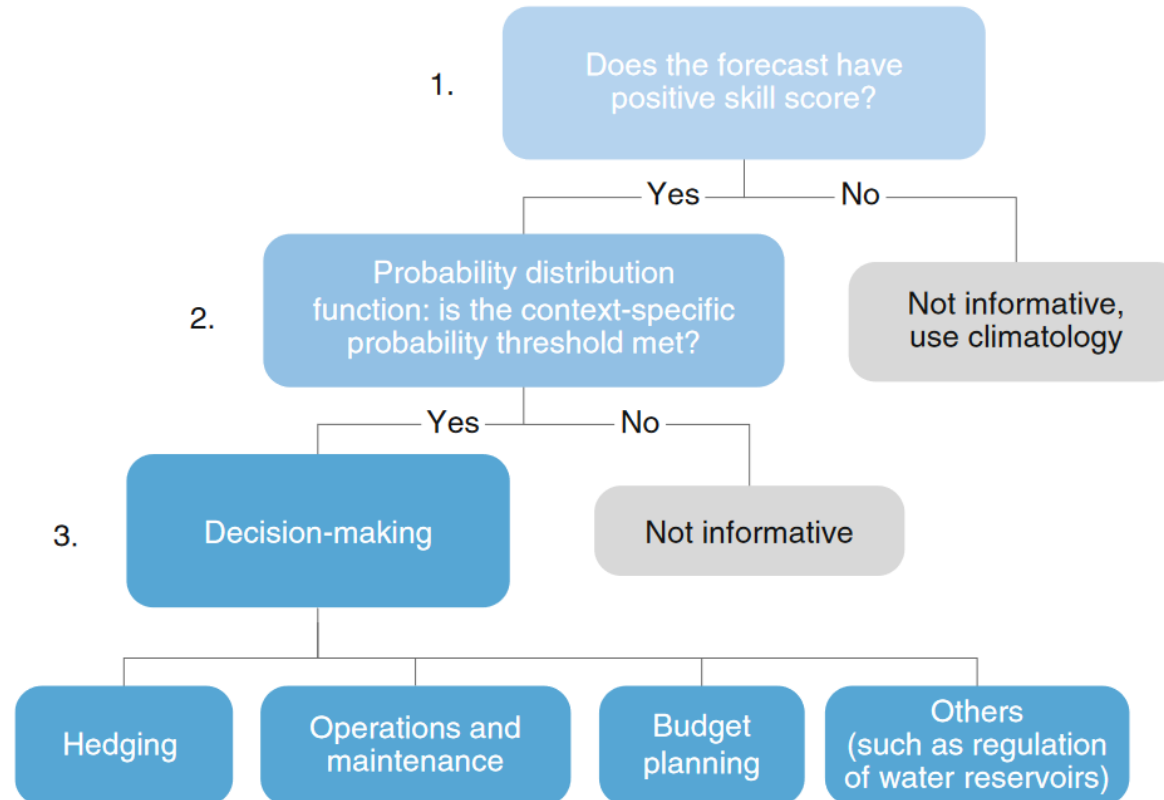

# Novel research lines: DestinationEarth

# Novel research lines: Economic assessment

Decision tree explaining user choices based on skill scores and probability distribution functions. In step 1, decision-makers look at the skill. In step 2, decision-makers look at the probability distribution of the forecast compared to the climatology of the weather variable of interest and, if this is informative, it can be incorporated into the decision-making either as qualitative or quantitative information in step 3.
