

Some results of High-Resolution forecast experiments in the Tropics

EC-Earth3.3 vs CNRM-CM6

A. Carreric, P. Ortega and many collaborators

Forecast systems: 2 climate models

	Components	Resolution SR HR	Atmospheric initialisation	Oceanic initialisation
EC-Earth3 	 IFS cy36r4  NEMO v3.6  Oasis  LIM3	 80 40  100 25	ERA5	in-house reconstruction (NEMO3.6 based)
CNRM-CM6.1  	 Arpège v6  NEMO v3.6  Oasis  Gelato v6	 160 60  100 25	ERA-interim	Glorys (NEMO-based)

Hindcast period: 1993-2014

Ensemble: 20 members

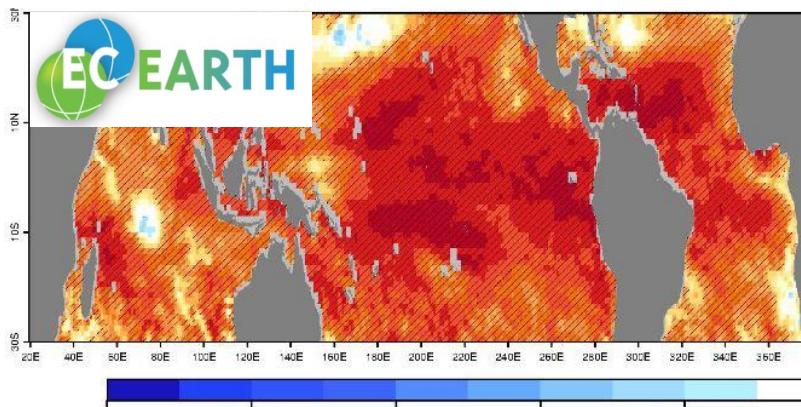

Initialisation in May

Predictive skill in the tropics

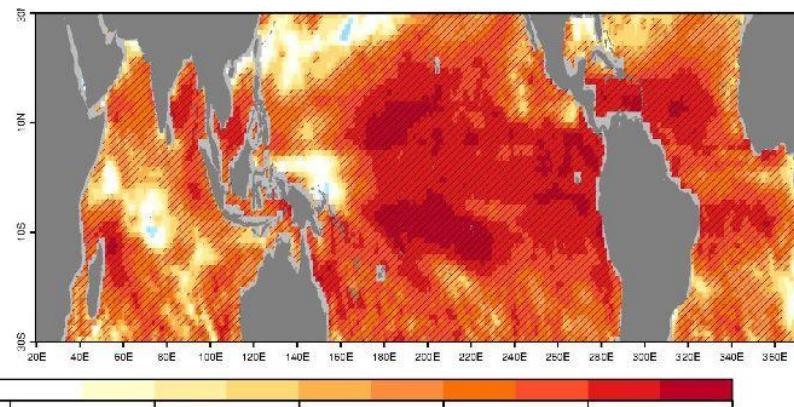

Sea surface temperature - JJA

Reference: SSTCCI v2.1

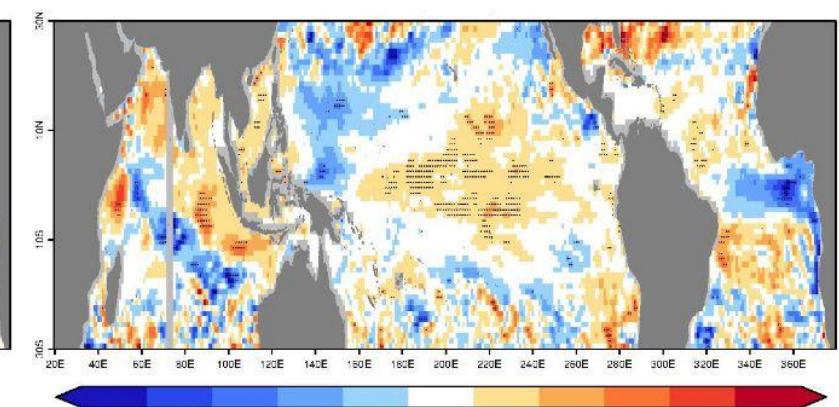

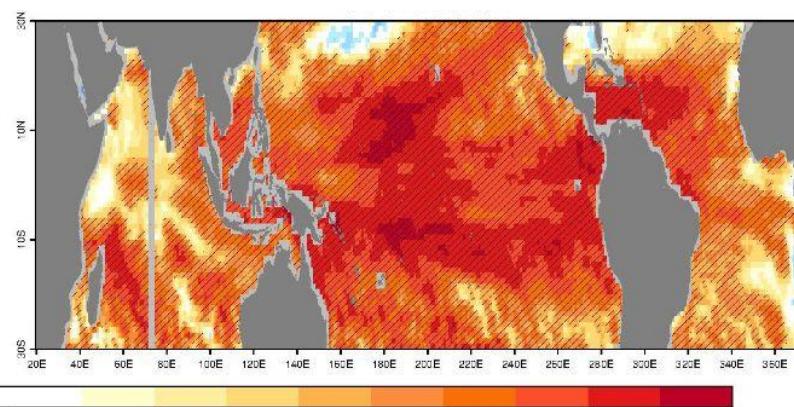

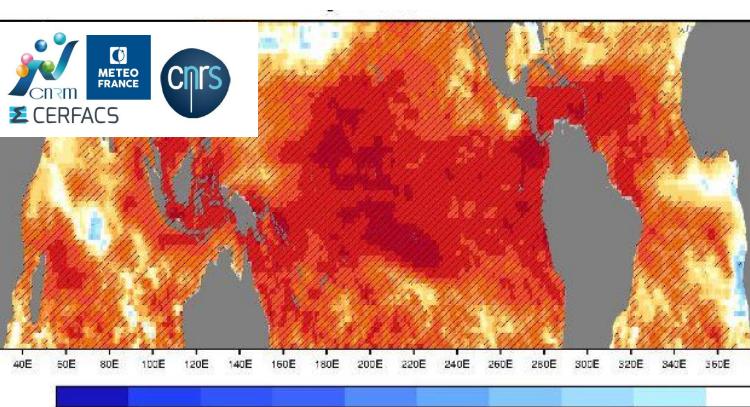

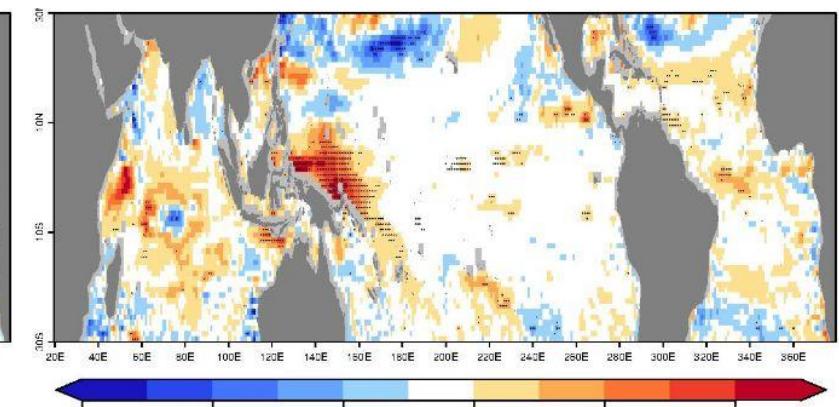

High Res

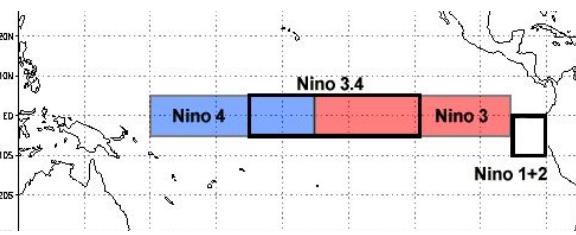

Standard Res

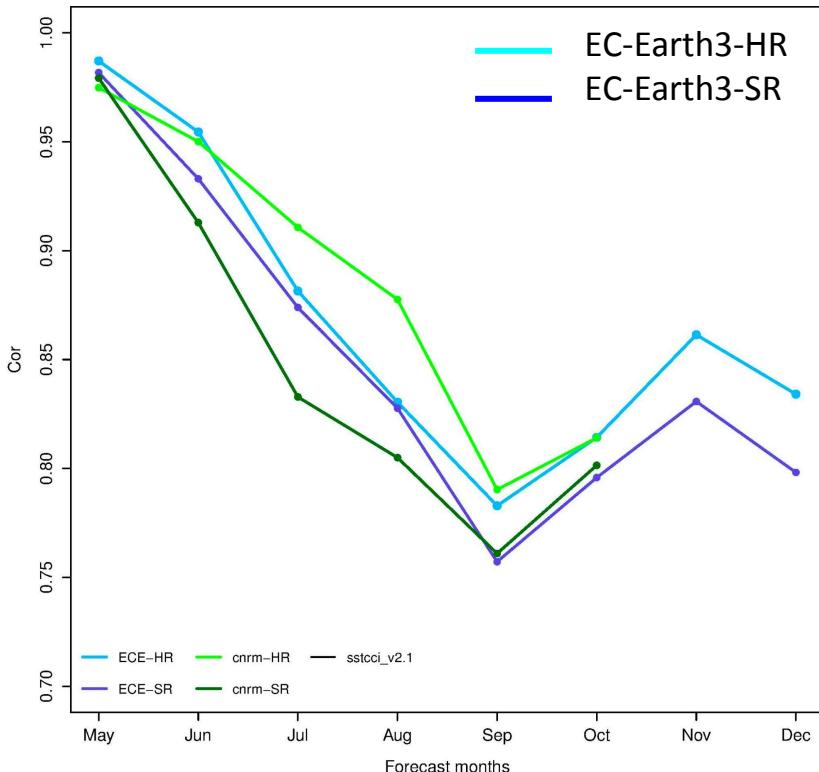

Correlation differences

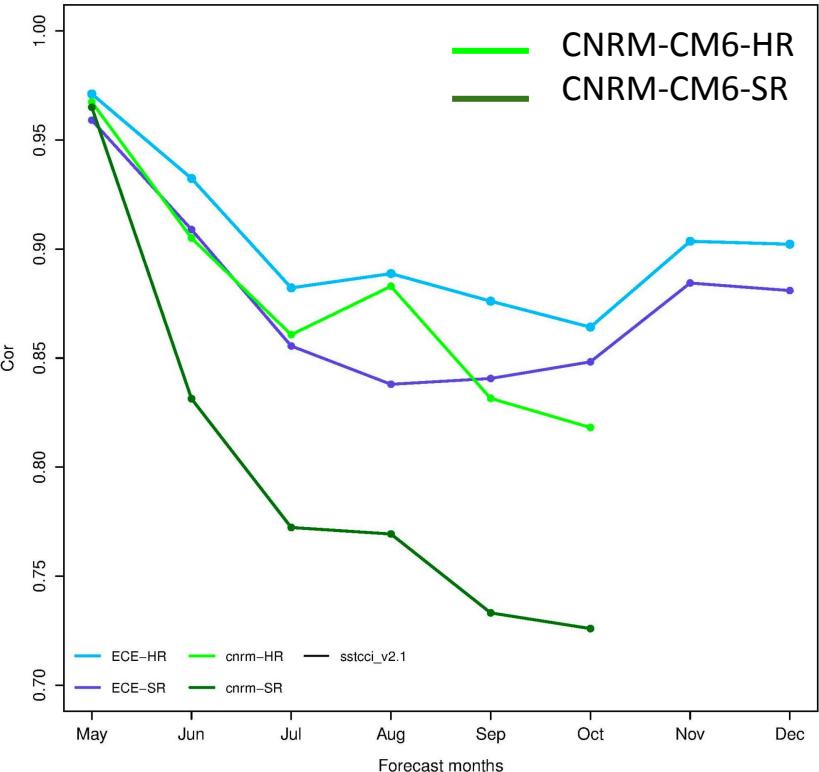

Timeseries ACC Niño regions

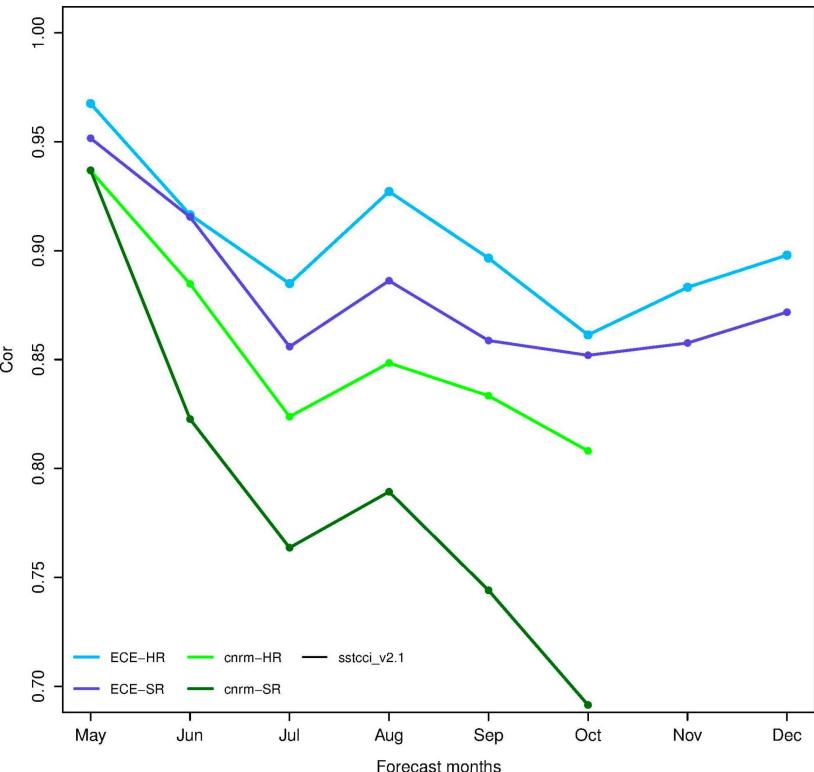

Niño4

Niño3.4

Niño3

Improvement of the skill with higher resolution for both models.
In the Niño4 region, smaller improvement in EC-Earth3.

Teleconnections with the Equatorial Atlantic

Supercomputing
Center*
Centro Nacional de Supercomputación

Teleconnections with the Equatorial Atlantic

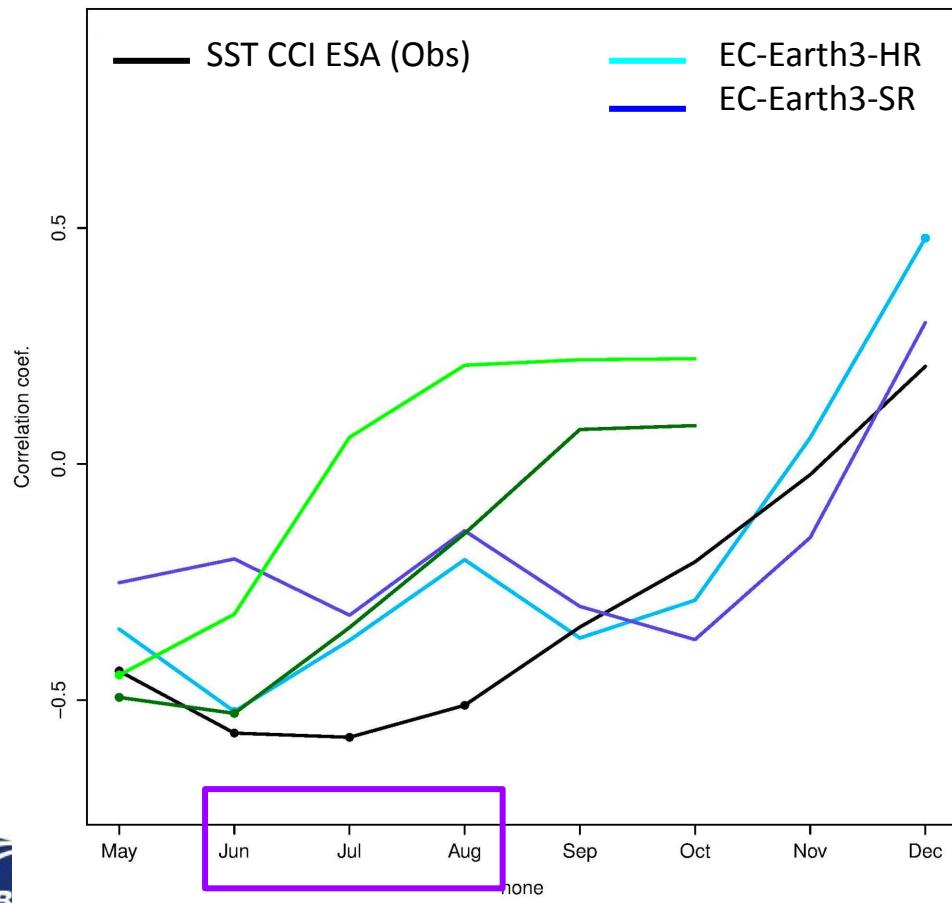

Summer (JJA) Atlantic Niños (Niñas) favor the development of Pacific Niñas (Niños) the following winter (DJF).

Rodríguez-Fonseca et al. (2009), Ding et al. (2012)

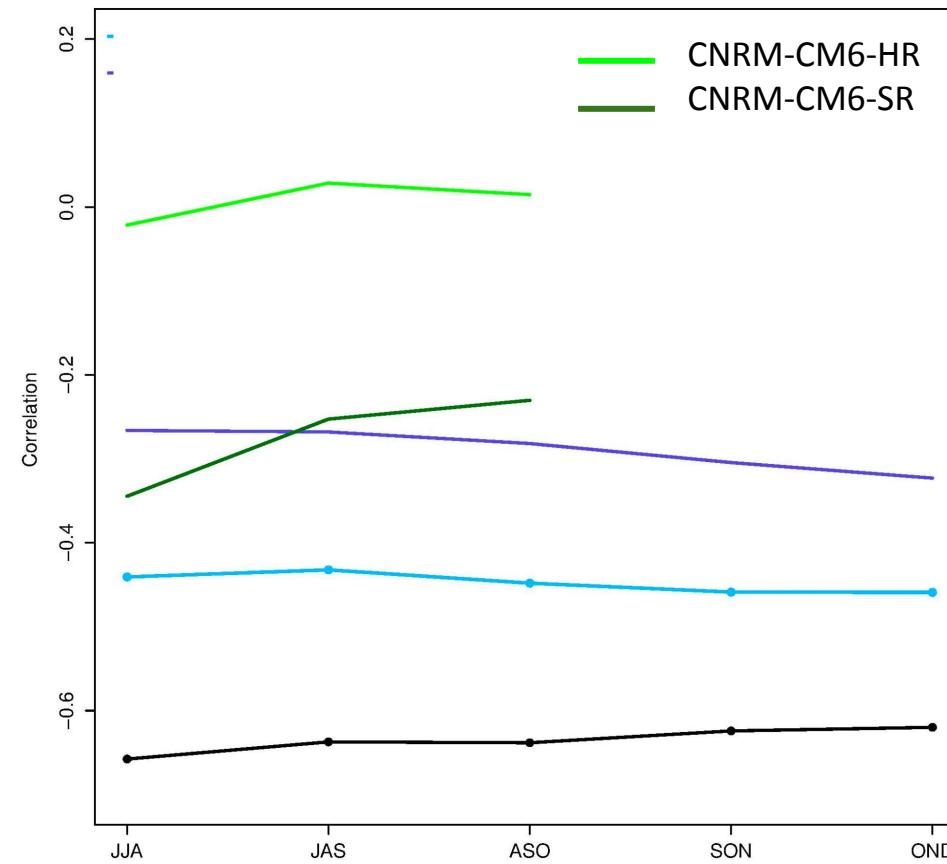

In the seasonal forecasts

Correlation ATL3 and Niño3.4 SSTA

Correlation ATL3 JJA and Niño3.4 lagged seasons SSTA

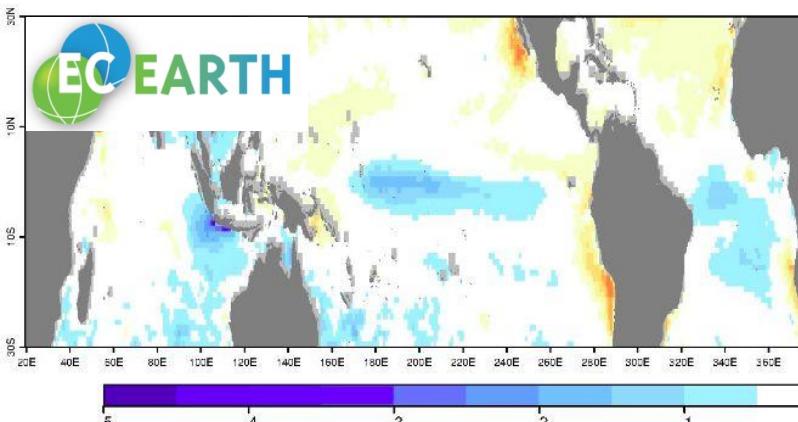

Limitations

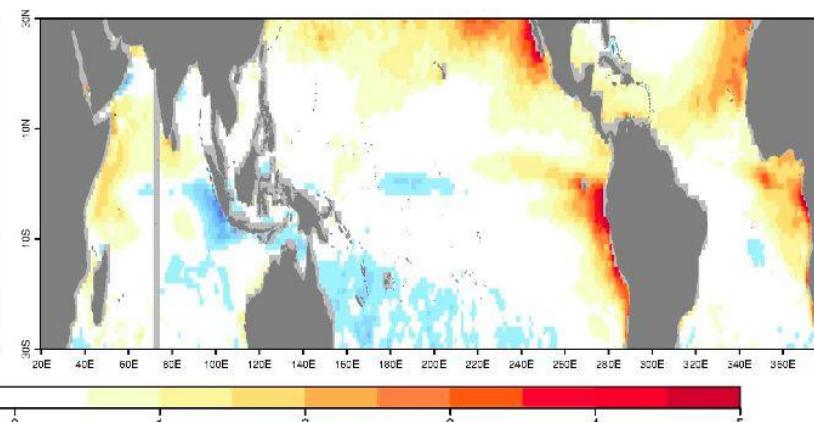

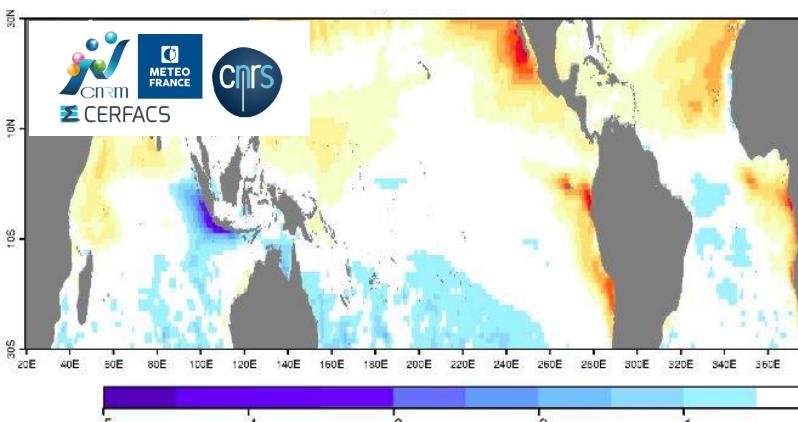

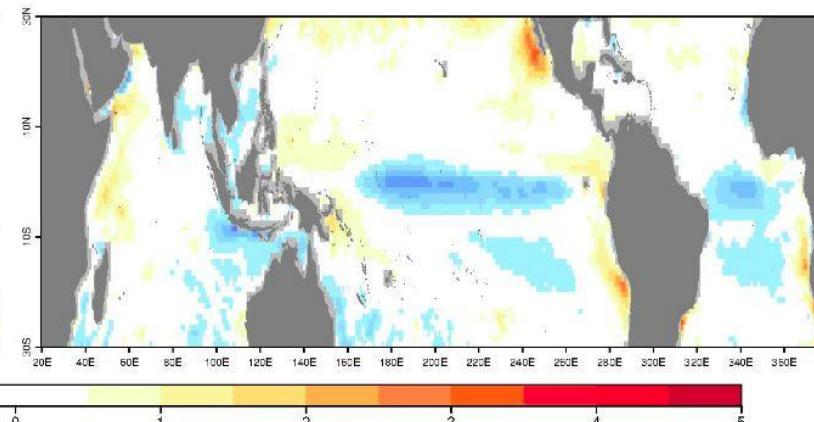

Bias in the mean state

Kucharski et al. (2015), Richter et al. (2018), Exarchou et al. (2021)
