

Mineral dust modelling and ensemblebased data assimilation at the Barcelona Supercomputing Center

Enza Di Tomaso

with inputs from the rest of the BSC Team

Barcelona Supercomputing Center Centro Nacional de Supercomputación

- To establish a delayed and NRT model monitoring/evaluation system using ACTRIS-2 data for the WMO Sand and Dust Storm-Warning and Assessment System (SDS-WAS) models.

Multi-Model Activities

- **To investigate the value of assimilating ACTRIS-2 data** in a dust prediction system (NMMB/BSC-CTM) for selected case studies in a regional domain.

→ BSC Dust Model

- To establish a delayed and NRT mode monitoring/evaluation system using ACTRIS-2 data for the WMO Sand and Dust Storm-Warning and Assessment System (SDS-WAS) models.

- To investigate the value of assimilating ACTRIS-2 data in a dust prediction

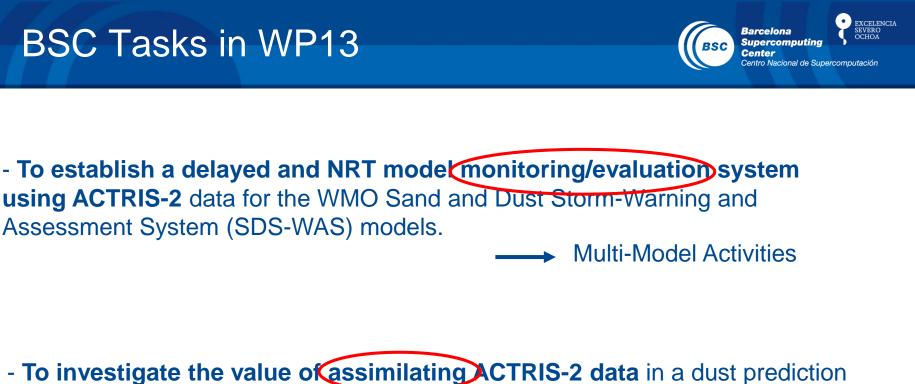

system (NMMB/BSC-CTM) for selected case studies in a regional domain.

system (NMMB/BSC-CTM) for selected case studies in a regional domain.

→ BSC Dust Model

We will build on our current capabilities that have been developed so far mainly for column-integrated products

WMO Dust Centres

BSC evaluation activities are carried out under two WMO initiativies

SDS-WAS: NRT Evaluation using AERONET

Model evaluation metrics (bias, correlation, RMSE and FGE) are calculated:

- By regions: NA-ME-E, Sahel/Sahara, Middle East and Mediterranean
- By time periods: monthly, seasonal and annual

NRL evaluation is performed also using not assimilated satellite observations

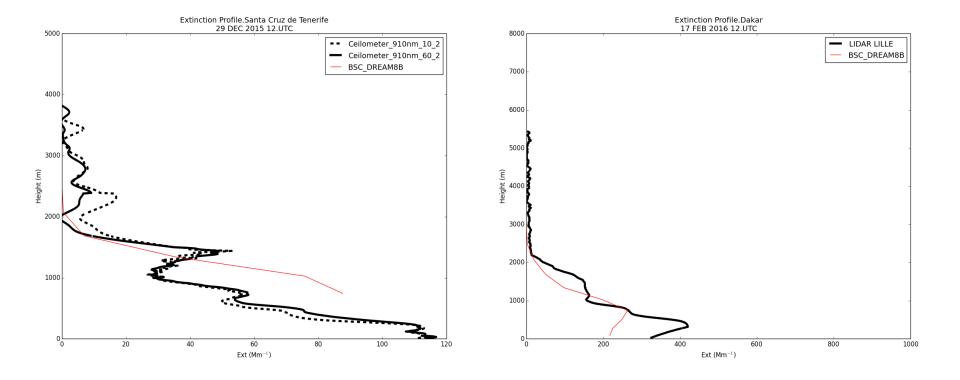

Slide courtesy of Sara Basart

SDS-WAS: Comparison of Vertical Profiles

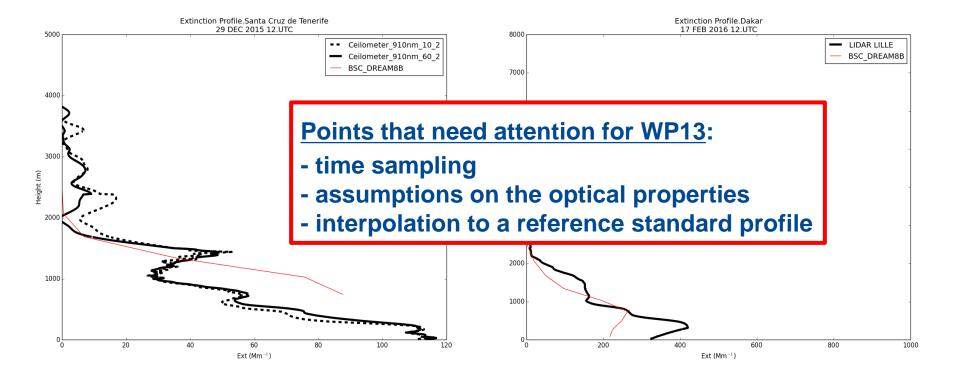

- Daily comparison of extinction vertical profiles involving the BSC-DREAM8b model and the profilers of Santa Cruz de Tenerife (AEMET) and Dakar (Univ. Lille)

- The plan is to extend it to other models and profilers

Slide courtesy of Enric Terradellas

SDS-WAS: Comparison of Vertical Profiles

SDS-WAS: Multi-Model Products

Barcelona Supercomputing Center Centro Nacional de Supercomputación

Surface concentration

AOD at 550nm

from 1-Oct-2015 12:00 to 3-Oct-2015 00:00

Model outputs are bi-linearly interpolated to a common 0.5^ox0.5^o grid mesh. Then, different multi-model products are generated:

CENTRALITY: median - mean

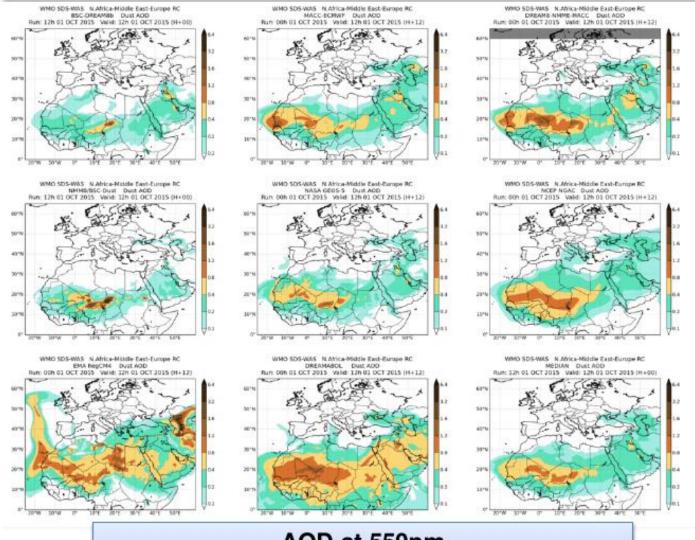

SPREAD: standard deviation - range of variation

Slide courtesy of Sara Basart

SDS-WAS: Joint Visualisation

Observation-space localisation for AOD - observation error is divided by a distance-dependent function that decays to zero with increasing distance (horizontal localisation)

- observation error is divided by the square of the model AOD normalised sensitivity function (vertical localisation)
