# R user meeting

12/12/2024

Victòria Agudetse, Ariadna Batalla, Theertha Kariyathan

# Agenda

1. Ice-breaker: package 'christmas'
2. News
  - startR
  - s2dv
  - CSTools
  - CSIndicators
  - esviz
  - SUNSET
3. Survey results
4. Q&A

# Ice-breaker: R package 'christmas'

**Barcelona  
Supercomputing  
Center**

*Centro Nacional de Supercomputación*

# R Package 'christmas'

[christmas](#) is a package that **creates different Christmas cards**. Some are cute, some are funny, some don't really work that well. Let's take a look...

```
library(christmas)
xmascaganer(year = 2025, language = "catalan", seed = 1)
xmasepitree(year = 2025)
xmashealth(year = 2025)
xmaselix(year = 2025)
xmasneon()
xmaspicasso(year = 2025, language = "catalan")
xmasregression(year = 2025, language = "english")
```

You can see all the functions in the [package documentation](#). Happy Holidays!

# startR

**Barcelona  
Supercomputing  
Center**

Centro Nacional de Supercomputación

# Improve error message about missing dimensions

Start() returns an error message if any of the specified dimensions are not found in some of the requested netCDF files:

```
> Could not find the dimension 'lat' in the file. (...)
```

If there was more than one dimension missing, the error message used to look like this:

```
> Could not find the dimension 'latlon' in the file. (...)
```

Now, it looks like this:

```
> Could not find the dimension(s) 'lat', 'lon' in the file. (...)
```

status: in master

# Possible deprecation of ecFlow as workflow manager

startR can be used to load heavy data in chunks and apply a user-defined function to each chunk. It can use a workflow manager (**Autosubmit** or **ecFlow**) to execute the chunks in parallel on an HPC.

Currently, both workflow managers are supported, but we are considering deprecating ecFlow, because:

1. We have internal support for Autosubmit
2. Newer ecFlow versions seem to give some problems in the BSC-ES Hub
3. It will be time-consuming to do new developments for two different cases

# Possible deprecation of ecFlow as workflow manager

The decision is not final yet, and ecFlow will continue working as it is **at least for as long as we have the workstations** and possibly longer if we can easily solve the issues in the Hub.

Steps to do before deprecation:

1. Solve some minor bugs in the implementation of Autosubmit
2. Update the practical guide
3. Update all use cases
4. **What else do you need to support you in this transition?**

# RandomWalk bugfix

Bugfix in .RandomWalkTest() when “A\_better” or “N.eff” is NA.

```
if (isFALSE(N.eff)){N.eff <- length(skill_A)}  
  if (!is.na(output$score) & N.eff >= A_better) {  
    p.val <- binom.test(x = A_better, n = floor(N.eff), p = 0.5,  
                        conf.level = 1 - alpha,  
                        alternative = test.type)$p.value
```

```
Error in if (!is.na(output$score) & N.eff >= A_better) { :  
  missing value where TRUE/FALSE needed
```

Comparing an NA in an if() clause gives an error

```
> if (NA >= 1) {print ("hello")}  
Error in if (NA >= 1) { : missing value where TRUE/FALSE needed
```

# RandomWalk bugfix

Bugfix in .RandomWalkTest() when “A\_better” or “N.eff” is NA.

```
if (isFALSE(N.eff)){N.eff <- length(skill_A)}  
  
if (!is.na(output$score) & N.eff >= A_better) {  
  if (!is.na(output$score) & isTRUE(N.eff >= A_better)) {  
    p.val <- binom.test(x = A_better, n = floor(N.eff), p = 0.5,  
                        conf.level = 1 - alpha,  
                        alternative = test.type)$p.value
```

Now if N.eff or A\_better is NA the condition returns as FALSE.

# New methods to `.make.eval.train.dexes()`

- Nuria added new cross-validation methods to the function `.make.eval.train.dexes()`.
- The function creates training indices for different cross-validation methods.
- The new methods are tested and unit tests were added.
- Next we will focus of simplifying the function and making it visible to the user with its own documentation.

# New parameters: caption + vertical colorbar

- **caption:** a character string of the caption located at left-bottom of the plot. Use "\n" to indicate a new line.
- **caption\_size:** scale factor for the figure caption. Default is 0.8.
- **vertical:** TRUE/FALSE for vertical/horizontal colour bar. Default is FALSE. Parameters 'width' and 'height' might need to be modified to accommodate the vertical colour bar.

Robinson Projection this is a test to see the caption.  
A super long caption. A very long caption with a lot of words that are wording all together.  
Great words. The best words  
There are a lot of words. How many more?  
Who knows, words are the best.  
there needs to be more words  
sorry there needs to be even more words  
all of the words.

# New parameters: caption + vertical colorbar

Question:

- When the color bar is horizontal, should the caption be placed above or below it?

# SUNSET

# Launching jobs on CTE-AMD and MN5

The launch\_SUNSET.sh script can now be used to launch jobs on CTE-AMD and MN5.

1. **Without Autosubmit:** Your output directory 'Output\_dir' should be in **/gpfs/**. You can launch the script directly from the HPC machine.
2. **With Autosubmit:** Your output directory 'Output\_dir' should be in **/esarchive/**, and you should launch the script from the Hub or a workstation. A temporary directory will be created in your **/gpfs/scratch/** automatically. When all the jobs finish, the outputs will be transferred back to **esarchive** and the temporary files will be cleaned.

We are working on a hands-on tutorial to show the step-by-step process.

# Downscaling module updates

There have been some updates from the `Intlr()` function from `CSDownscale`:

1. In the `lr_method = "9nn"` option, Principal Component Analysis (PCA) is applied. A bug related to this application was identified in the function and has been corrected.
2. If `exp ("hindcast")` and `exp_cor ("forecast")` have the same number of members, each member is now downscaled individually, so that the downscaling equations derived from each hindcast member are applied to the same forecast member.

# Documentation improvements

We have added some new information to the SUNSET README.md file detailing the first steps to using the tool: <https://earth.bsc.es/gitlab/es/sunset#getting-started-with-sunset>

Remember that, additionally, we have:

- The [wiki](#)
- Step-by-step [use cases](#)
- A [recipe template](#)

We are working on more improvements. If you have any suggestions or miss anything, please comment in this issue: [Documentation: Errors, improvements and changes](#)

# R user meeting survey

Supercomputing  
Center**

Centro Nacional de Supercomputación

# R user meeting survey

0. How long have you been in the BSC R community

8 responses

# R user meeting survey

## 1. Which parts of the user meeting do you find useful?

8 responses

# R user meeting survey

## 2. What percentage of the PACKAGE NEWS can you follow usually?

8 responses

# R user meeting survey

## 3. What percentage of the SUNSET UPDATE can you follow usually?

8 responses

# R user meeting survey

4. How often do you attend R user meetings?

8 responses

# R user meeting survey

5. We are considering replacing some R user meetings with R support hours, where the R Dev Team books a meeting room and the users can come during the meeting to be replaced with an R support hour?

8 responses

- Alternating every month
- R support hour once every three months (ex: February and March R user meeting, and April R support hour)
- R user meeting once every three months (ex: February R user meeting, March and April R support hour)
- I prefer to have R user meetings every month

# R user meeting survey

6. Which internal packages/tools do you use? Note that if you only use the package within SUNSET, you should only select SUNSET.

8 responses

# R user meeting survey

7. What things did you find difficult when you started using R tools in our department? Is there any missing information that would be nice to have?

Difficulties:

- Difficulty knowing which what the packages do and how to use them
- Difficulty using MultiApply, startR, SUNSET
- Configuring RStudio/VSCode in Nord3 and MN5

Nice to have:

- Documentation,
- exercises / use cases
- R packages guide / summary

How can we make the information more easy to access?

# R user meeting survey

8. Do you have any other suggestions/requests/feedback?

- Help in improvement of functions
- Showing and sharing codes during the User presentation, with some to-do and not-to-do personal feedback of the presenter.

# Thanks for joining
