

BSC

Earth System Services

“Modelling the earth system to provide a robust understanding of meteorological Risks and optimise management strategies “

The Earth System Services group facilitates technology transfer of state-of-the-art research from local, national to international levels in:

- Climate predictions
- Mineral dust modeling
- Air quality assessments
- Weather forecasting

Our main goal is to advance sustainable development in key sectors such as **energy, urban development, infrastructure, transport, health and agriculture.**

By combining highly qualified scientific researchers, impact modelers and in-house software developers, BSC-ES works with the end-user to develop a complete range of services that meet their requirements.
